
Claims

What is claimed is:

1. A life saving device comprising of a control module, a switch or sensing pad in the child seat which will make contact when the child is in the seat; and a wiring harness connecting the seat sensing switch/pad to the control module and subsequently to the vehicle's horn and lighting systems.
2. The device of claim 1, wherein the device will be powered by the vehicle's 12-volt electrical system when the vehicle is operating and by the battery when the vehicle is parked/engine not operating.
3. The device of claim 1, wherein the device has two modes of operation, mode 1 and mode 2.
4. The device of claim 1, wherein mode 1, the sensing switch/pad will detect when a child is in the seat.
5. The device of claim 1, wherein when the driver's door is opened, the timer will start.
6. The device of claim 1, wherein in mode 2, the built-in temperature sensor will send a signal to the vehicle's horn and lighting systems causing intermittent sounding of the horn and flashing of the lights.
7. The device of claim 1, wherein the control module comprises an internal temperature sensor, power on indicator light, reset button, and timer.
